Post-School Outcomes

Monitors outcomes of students with disabilities one year after leaving high school. It examines whether these students are enrolled in higher education, have competitive employment, or are in some other form of education or training.

Why Is It Important?

Post-school outcomes data provides insight into how effectively schools prepare students with disabilities to transition to adulthood. This data can highlight gaps in services or supports that may need improvement, such as transition planning or vocational training, which is crucial for improving long-term success for students with disabilities.

What Does It Measure?

Within one year after leaving HS:

A Enrolled in higher education

B Enrolled in higher education or competitively employed

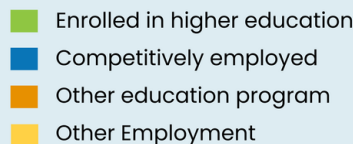

C Enrolled in higher education, or some other postsecondary education/training program; or competitively employed or in some other employment

23-24 Data

surveyed:
43,816

responded:
28,150

Response rate:
64.25%

Progress in Improving Post-School Outcomes

SPPI targets are goals set by the state to see how well schools are supporting students with disabilities. The state checks the results each year to see if these goals are being met. Indicator 14 data, as shown here, indicates steady performance in post-school outcomes that is near or exceeding targets.

Tips for Supporting Students

Promote self-advocacy skills to help students effectively navigate college, employment, and/or vocational training after high school.

Support students in exploring career, education, or training opportunities and ensure supports are in place to help achieve their goals.
